

Wheelchair Suspension Literature Review

Seating Dynamics

Michelle L. Lange, OTR/L, ABDA, ATP/SMS

May 22, 2018

(in reverse chronological order)

The following are results of a literature review on Wheelchair Suspension. Suspension is typically a part of the wheelchair frame and is designed to partially absorb vibration and forces from the surface that would otherwise be translated to the wheelchair user.

1. Hischke, M., et al. (2018). Effect of rear wheel suspension on tilt-in-space wheelchair shock and vibration attenuation. *Physical Medicine & Rehabilitation*.
2. da Silva, U. S. L. G., Villagra, H. A., Oliva, L. L., & Marconi, N. F. (2017). Effects of whole-body vibration during wheelchair propulsion in individuals with complete spinal cord injury. *European Journal of Physical Education and Sport Science*.
3. Brown, K., Flashner, H., McNitt-Gray, J., & Requejo, P. (2017). Modeling Wheelchair-Users Undergoing Vibrations. *Journal of biomechanical engineering*, 139(9), 094501.
4. Wang, T., Kaneko, J. I., & Kojima, K. (2017, October). Study on relevance between electric wheelchair riding comfort and user exposure to whole-body vibration. In *Consumer Electronics (GCCE), 2017 IEEE 6th Global Conference on* (pp. 1-2). IEEE.
5. Dziechciowski, Z., & Kromka-Szydek, M. (2017). Vibration Transmitted to the Human Body during the Patient's Ride in a Wheelchair. *Archives of Acoustics*, 42(1), 137-148.
